

Park Jongchan

Email: daisophila@gmail.com | GitHub | Google Scholar | LinkedIn

Education

Korea Advanced Institute of Science and Technology(KAIST)

Daejeon, Republic of Korea

- M.S. in Electrical Engineering Aug 2023 – Feb 2025
- Master's Thesis: Pretraining a Shared Q-Network for Data-Efficient Offline Reinforcement Learning
- Advisor: Prof. Donghwan Lee
- GPA: 3.75/4.3
- **Distinction:** Early Graduation (One Semester)

Kookmin University(KMU)

Seoul, Republic of Korea

- B.S. in Mechanical Engineering, Minor in Electrical Engineering Mar 2018 – Feb 2023
- GPA: 4.46/4.5
- **Distinction:** Early Graduation (One Semester)
- Leave of absence for mandatory military service, Republic of Korea Jul 2019 – Feb 2021

Publications

*Equal contribution

- **Lifted Bellman Linear Programming for Offline Reinforcement Learning**
Hyukjun Yang, **Jongchan Park**, Narim Jeong, Donghwan Lee
Submitted to *ICLR*, 2027
- **Scalable Reinforcement Learning via Adaptive Batch Scaling**
Jongchan Park (sole author)
ICML, 2026
- **Pretraining a Shared Q-Network for Data-Efficient Offline Reinforcement Learning**
Jongchan Park*, Mingyu Park*, Donghwan Lee
NeurIPS, 2025 (Based on my M.S. thesis)
- **Power Consumption Optimization of GPU Server with Offline Reinforcement Learning**
Heechan Chung*, Yeeun Im*, **Jongchan Park***, Taeho Lee*, TaeYoung Kim, Hyungjun Kim, Donghwan Lee
IEEE Access, 2025

Experience

NaverLabs

Pangyo, Republic of Korea

- **AI Robotics Engineer** / Robot Data Platform Team Aug 2026 –
- **Responsibilities:**
 - Designing end-to-end robotics systems and AI agents (VLA & RL) for real-world generalization
 - Developing and evaluated large-scale robotics models (VLA) alongside streamlined training pipelines
 - Building automated data pipelines for robot sensor data to power AI model and agent development

Hyundai Motor Company

Pangyo, Republic of Korea

- **Research Engineer** / Vehicle Control Technology Development Team 2 Jan 2025 – Aug 2026
- **Projects:**
 - Developing a Real-Time Target Velocity Generator via Flow-Matching Policies 2026
 - Constructing a World Model for Vehicle Chassis Domains based on CAN Sensor Signals 2026
 - Optimizing Electric Vehicle Torque Distribution(Front/Rear) via Offline RL 2026
 - Developing Driving Controller for SDV(Software Defined Vehicle) Proto Vehicle Platforms 2025 – 2026

- Automating Vehicle Calibration using RL Frameworks 2025 – 2026
- Developing an XCP-based CAN Interface for RL Training & Evaluation on Vehicle 2025
- **Industry-Academic Collaborative Projects:**
 - Automating Vehicle Calibration using Inverse RL (KAIST) 2025 – 2026

Reinforced Decision Intelligence Lab

Daejeon, Republic of Korea

- **Master's Student Researcher** Aug 2023 – Jan 2025
- **Industry-Academic Collaborative Projects:**
 - Mobile Robot(Jackal) Wheel Slip Control via Online RL (Hyundai Motor Company) 2024
 - Optimizing Power Consumption of GPU Server via Offline RL (Korea Telecom) 2024
- **In-Class Projects:**
 - Developing a 4-legged Robot Simulator based on Robot Dynamics 2024
 - Training a 4-legged Sumo Robot via Online RL 2023

Honors & Awards

- **ICML Gold Reviewer Award** 2026
- **Hyundai Icon Award** 2025
Periodic company award recognizing employees for outstanding research and engineering performance
- **Hyundai Motor Company Research Scholarship** 2024
- **Valedictorian (Highest Academic Honors)** 2023
Ranked 1st among approximately 70 students in the Department of Mechanical Engineering
- **Academic Excellence Scholarship** 2021 – 2022
- **Academic Excellence Scholarship** 2018 – 2019

Services

International Conference Reviewer

- ICML Main Conference Reviewer 2026

Teaching Assistant

- Mathematical Foundations of Reinforcement Learning(EE619) 2024
